RESEARCH PROFILE

Doctoral researcher in Information Systems Science at the Turku School of Economics, University of Turku. My dissertation examines the governance of delegated authority to AI systems in organisations: how firms design and implement the rules, roles, procedures and control structures that determine which decisions are handed to AI, how human oversight is exercised in practice, and how authority is re-claimed when a system must be overridden or a decision escalated back to a human. The work is grounded in a systematic literature review of organisational AI governance mechanisms and draws on socio-technical and design science perspectives. Its business relevance is immediate: as AI moves from advisory tools to agentic systems that act, firms need oversight arrangements that satisfy emerging regulatory obligations without discarding the efficiency that motivated delegation in the first place.

CURRENT POSITION

Doctoral Researcher, Information Systems Science Jan 2026 – present
Turku School of Economics, University of Turku

- Doctoral Programme in Technology (DPT); degree read for: Doctor of Science (Economics and Business Administration), major subject Information Systems Science.
- Supervisors: Prof. Matti Mäntymäki (principal), Matti Minkkinen (co-supervisor)
- Target date of defence: 2030

EDUCATION AND DEGREES

Doctoral studies, Information Systems 2026 – 2030
Turku School of Economics, University of Turku

Master of Science in Business Analytics 2023 – 2025
Oulu Business School, University of Oulu | GPA 4.67 / 5.00

- Master's thesis: Impact of Brand Image on Customer Purchasing Behaviour (grade 5/5). Supervisor: Assistant Prof. Timo Koivumäki. Applied SEM and machine-learning models to 3,600 customer survey responses.

Bachelor of Business Administration in Finance 2017 – 2022
University of Dhaka, Bangladesh

RESEARCH FUNDING AND AWARDS

- Doctoral research funding for 2026 from three research projects led by Professor Matti Mäntymäki, University of Turku.
- UTUGS doctoral researcher funding, University of Turku Graduate School, 24 months (start date flexible).
- University of Oulu Scholarship, two-year tuition scholarship for MSc studies, 2023–2025.

PREVIOUS WORK EXPERIENCE

Project Researcher Oct 2025 – Dec 2025
Department of Management and Entrepreneurship, University of Turku

- Built an API-based extraction tool for collecting user dialogue data on AI governance tensions, compiled the project's methodological reference base, and gathered organisational AI governance policy documents for analysis.

Learning Analytics Intern May – July 2024
Oulu Business School, University of Oulu

- Co-authored the departmental report Advancement of Digitalization in Education; developed the structure for a MOOC on the Digicampus LMS and contributed to digital pedagogical design for two courses.

Marketing Analyst 2020 – 2022
Course Platoon (education technology company), Dhaka, Bangladesh

- Conducted market research and analytics supporting strategy and customer acquisition.

PUBLICATIONS AND CONFERENCE ACTIVITY

- Gomes, J. F., Yaraghi, N., Zaman, S., & Ahokangas, P. (2025). Understanding nature-positive business models: A qualitative study on value accumulation across people, planet, and profit. In Proceedings of the Smart Service Summit 2025: Smart Services for a Sustainable and Resilient Future. (In press).

RESEARCH EXPERIENCE AND METHODOLOGICAL COMPETENCE

My doctoral work is built on an ongoing systematic literature review of organisational AI governance, screening a large corpus against a two-pillar protocol covering the design of governance mechanisms and the delegation of authority to AI, with the protocol, exclusion codes and decision log documented for reproducibility. Earlier projects have given me a broad quantitative and qualitative base: a team study predicting nurses' stress during COVID-19 from physiological signals, applying time-window segmentation, correlation analysis and gradient-boosted classification with leave-one-group-out cross-validation; and a study of reputation and customer trust at Osuuskauppa Arina, where we designed and deployed the member survey and then carried out exploratory analysis, factor analysis and structural equation modelling in R.

METHODOLOGICAL AND TECHNICAL SKILLS

- Quantitative methods: structural equation modelling (lavaan), factor analysis, ANOVA, regression, predictive modelling and machine learning (logistic regression, random forest).
- Qualitative and review methods: systematic literature review (PRISMA), protocol design and coding, qualitative content analysis.
- Tools: Excel, Python, R, SPSS, Power BI, Tableau.
- Research approaches: design science research, socio-technical systems perspectives, human–AI interaction.

LANGUAGE SKILLS

- Bengali — native.
- English — fluent (IELTS 7.0); working language of research.
- Finnish — elementary (A2).

REFEREES

- Prof. Matti Mäntymäki, Turku School of Economics, University of Turku — matti.mantymaki@utu.fi — principal doctoral supervisor
- Assistant Prof. Matti Minkkinen, Turku School of Economics, University of Turku — matmin@utu.fi — doctoral co-supervisor
- Assistant Prof. Timo Koivumäki, Oulu Business School, University of Oulu — timo.koivumaki@oulu.fi — MSc thesis supervisor
